(54) Title: MULTIPATH MITIGATION

(57) Abstract: A signal is transmitted from
a transmitter (10) to a receiver (20) both
directly (2) and indirectly (6) giving rise to
multipath effects. A number of predetermined
correlation shapes and respective correction
shapes are provided, the correction shapes being
correlation shapes with the direct line-of-sight
component removed. The received signal
is fitted to the correlation shapes, optionally
scaling the correlation shapes, and then the
correction shape corresponding to the best
match correlation shape is subtracted from the
received signal to obtain a corrected correlation
shape.
